PROFESSIONAL SUMMARY

SDET with 3+ years of experience building scalable UI/API automation frameworks and high-performance automation systems using Playwright, Selenium, REST Assured, Java, Python and TypeScript. Specialized in automation architecture, workflow optimization, browser automation and reducing large-scale manual operations through engineering focused tooling. Strong experience in CI/CD integration, API testing, microservices validation and automation-driven process acceleration.

CORE SKILLS

- **Automation:** Playwright (Typescript), Selenium WebDriver, REST Assured, Karate, Postman
- **Languages:** Java, Python, TypeScript
- **Frameworks:** TestNG, JUnit, Cucumber (BDD), POM, Data Driven Frameworks.
- **Testing:** API, UI, Microservices, Cross-Browser, Parallel Execution.
- **Tools:** Git, GitHub, Azure DevOps, GitHub Actions, Docker, SQL, JIRA
- **Concepts:** System Design (Basics), OOP, Design Patterns, CI/CD
- **Data & ML:** Pandas, NumPy, OCR(Tesseract), Image processing, ML-assisted validation

EXPERIENCE

Associate Consultant (B1) | Capgemini, Hyderabad | July 2026 – Present

- Designing scalable automation frameworks and reusable tooling for enterprise testing workflows.
- Driving automation initiatives to eliminate repetitive manual operations and improve execution efficiency.
- Mentoring junior engineers, conducting code reviews and leading onboarding/knowledge transfer activities.

Senior Software Engineer (A5) | Capgemini, Hyderabad | Jan 2025 – July 2026

- Engineered a reconciliation automation platform reducing manual processing from 1 week to under 1 minute.
- Built ML-assisted validation systems achieving ~95% coverage and reducing defects by 30%.
- Led AI-driven automation initiatives reducing QA cycles by ~25%.
- Designed scalable automation workflows integrating reporting, validation and data pipelines.

Software Engineer (A4) | Capgemini, Hyderabad | Apr 2023 – Jan 2025

- Developed reusable API automation frameworks and scalable test architecture for validation, reporting and microservice verification workflows.
- Implemented Cucumber BDD for business-readable automation and improved test maintainability.
- Optimized regression execution through parallel execution strategies, reducing execution time by 30%.
- Performed end-to-end testing across UI and API layers in Agile environments.

PROJECTS

Recon Engine —Automation Tool (Python)

- Built a reconciliation engine for large-scale financial dataset validation and discrepancy detection.
- Implemented exact and fuzzy matching algorithms for record reconciliation.
- Optimized processing through Pandas vectorization for high-volume datasets.
- Generated automated audit-ready validation reports.

LinkedIn ATS Engine

- Developed a Python Selenium Automation script to search LinkedIn for Jobs matching users search criteria posted in the last 24 hours.
- Engineered an ATS algorithm with Hugging face to resume matching against job description to create an ATS score.
- Deployed to run daily at designated time in Docker via GitHub actions.
- Generates and emails daily reports to user containing the top 10 jobs based on search criteria, with ATS score, tips and apply link daily.

IRCTC Ticket Automation System (Playwright + TypeScript)

- Engineered a high-speed Playwright based automation system optimized for Tatkal ticket booking workflows.
- Engineered advanced browser automation workflows for dynamic web interactions and validation scenarios.
- Integrated OCR/ML-based image recognition for automated validation workflows.
- Built a GUI-based runtime control system for dynamic passenger, station and payment configuration.

EDUCATION

Bachelor of Mechanical Engineering — Academy of Technology, MAKAUT | GPA: 8.54 | Jun 2022

CERTIFICATIONS

- SAFe 6 Practitioner
- GitHub Copilot
- Data Structures and Algorithms in Java
